

Thought from the Eye

“Thought from the eye closes the intellect [understanding],
whereas thought from the intellect opens the eye.”
(Divine Love and Wisdom 46)

What are some of the appearances that would blind you to reality if you relied solely on what you can see? For example, unless you are viewing it from the perspective of outer space, the earth appears to be flat. Icebergs appear to be much smaller than they are. Is a tree just what we see above the ground? Can you think of some other examples where what our natural eyes see can fool us?
